PROFESSIONAL SUMMARY

Backend Software Engineer specializing in Node.js/TypeScript, SQL performance, and cloud-native SaaS backends. Strongest in startup environments where ownership spans API design, production support, CI/CD, client migrations, and cost/performance optimization across AWS, Google Cloud, and Azure.

WORK EXPERIENCE

Lead Software Engineer (Full-time/Contract) | OnSched - *Remote | December 2025 - Present*

- Led backend delivery for OnSched v2 on a 3-engineer team, turning product requirements into API architecture, code reviews, and sprint execution
- Shipped 20+ production features/endpoints across scheduling, availability, and migration workflows for 100+ migrated clients
- Owned advanced SQL CTE availability queries and Google Cloud CI/CD across dev, staging, and production during v2 rollout

Software Developer (Full-time/Contract) | OnSched - *Remote | June 2024 - December 2025*

- Cut Azure/MSSQL spend from ~$10K to ~$5.5K/month while improving CPU usage and query performance across legacy workloads
- Engineered OnSched v2 backend as sole backend owner during acquisition, designing Node.js/Express APIs and migration workflows
- Resolved 50+ client support tickets per month while shipping urgent backend fixes and customer-facing scheduling features

Software Developer (Full-time/Contract) | SpeakSynk - *Remote | June 2023 - April 2024*

- Co-designed backend architecture for an AI video translation platform used by 15–20 beta users
- Built Node.js/TypeScript REST APIs for video metadata, sessions, language pipelines, users, authentication, and Stripe billing workflows
- Engineered AWS event-driven processing with Kafka, Step Functions, and Lambda for video/audio jobs and real-time pipeline status updates

Software Developer (Part-time/Contract) | Arbelos Interactive - *Remote | April 2023 - Present*

- Built NestJS/TypeScript REST APIs for a multi-tenant content streaming platform supporting music, shows, movies, and client-managed metadata
- Designed Google Cloud Pub/Sub and Cloud Functions pipelines to automate media processing, database synchronization, and Contentful CMS integration

SKILLS

- *Languages/Frameworks*: JavaScript/TypeScript, SQL, Python, React/NextJS, Express.js, NestJS
- *Cloud Services*: Google Cloud (Pub/Sub, Cloud Functions, Cloud Run, Storage), AWS (S3, Lambda, Step Functions, Cognito, RDS), Firebase
- *Database & Messaging*: PostgreSQL, MySQL, NoSQL, Kafka, Redis
- *Tools*: Git, Docker, Terraform, Stripe API

EDUCATION

Flatiron School — Manhattan, NY

Fullstack Web Development, Computer Programming — November 2018 - March 2019
